

**Item Name :** Slotted Masses in Wooden Block

**Item Code :** 1343.2008.01

**Item Description :**

Consists of three slotted brass masses of 50g each, contained in cylindrical wells drilled in a wooden block. The wooden block has a hook at its one end to enable its use as a slider block of varying mass in various motion/friction experiments. Slotted masses can also be used for loading by suspending from a suitable hanger, as and when needed.
